DEVELOPING YOUR GAME MODEL PART 1

A close-up photograph of a white computer keyboard. A finger is hovering over a key that has a blue folder icon and the text "Learning Outcomes" printed on it. Other keys visible include the backspace key, a key with a circular arrow icon, and the alt key.

LEARNING INTENTIONS

By the end of this module, you will be able to:

- 1. State what a game model is and provide examples of what a game model contains**
- 2. Apply the Canada Soccer framework to develop a game model**
- 3. Analyze and evaluate the game using the Canada Soccer game principles**

CLARITY

ENGAGEMENT

POST IT NOTE

**What is a 'Game
Model' & why might
we need one?**

**Game
Model**

**Decision
Making
Framework**

GAME MODEL

“The game is very complex and requires a framework for players and staff to reference. With up to 22 players playing in a playing area of approximately 120 * 80 yards, with a unique set of rules, the game creates a matrix of continuous situations (problems) that players need to solve with time, space and game state stressors. Therefore, I believe the game needs to be compartmentalized into smaller components (moments and zones) each with a set of rules (principles) that the players can use to effectively navigate the game and opponents.”

Dalrymple (2024)

GAME MODEL

“The game is very complex and requires a **framework for players and staff to reference**. With up to 22 players playing in a playing area of approximately 120 * 80 yards, with a unique set of rules, the game **creates a matrix of continuous situations (problems)** that players need to solve with time, space and game state stressors. Therefore, I believe the game needs to be compartmentalized into smaller components (moments and zones) each with a set of rules (principles) that the players can use to **effectively navigate the game and opponents.**”

Dalrymple (2024)

**“There is no
right way.
There are only
decisions.”**

(Bartlett, 2022)

GAME MODEL FRAMEWORK

DEVELOPING A GAME & TRAINING MODEL

1

WHO ARE WE?

Coach Philosophy, Team
Philosophy, Vision & Values

2

HOW DO WE WANT TO PLAY?

Playing Philosophy: System-
Strategy-Tactics

3

HOW DO WE COACH?

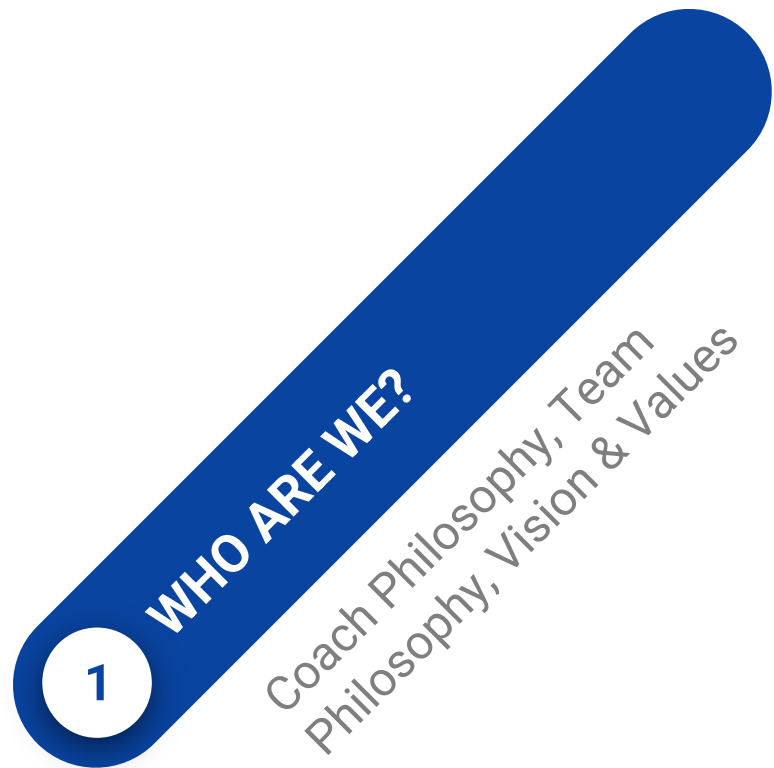

Practice Methodology, Coaching
Methodology & Process

4

FUTURE CANADIAN PLAYERS

Individual Development
Priorities: Skill Set

DEVELOPING A GAME & TRAINING MODEL

This is critical and embodies not only your beliefs and values but also the local culture and club/organization you are coaching in.

We will explore this further during the 'Connected Coaching' module.

DEVELOPING A GAME & TRAINING MODEL

We will begin here and continue to evolve our perspectives and ideas as the course continues.

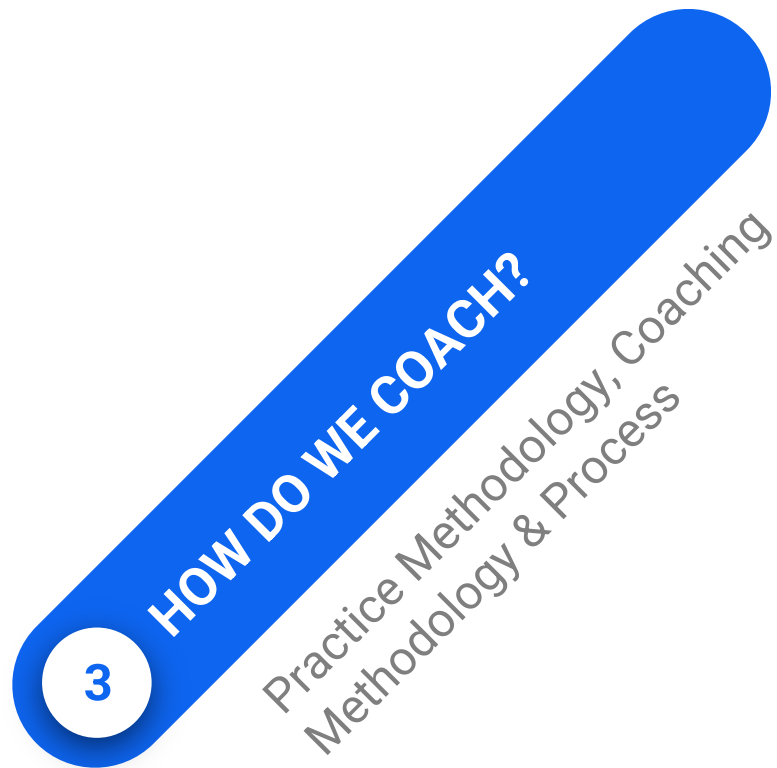

System

A system of play is to provide a range of structures, via the positional arrangement of players establishing communication channels for players into units to help achieve the desired strategy and tactics.

Strategy

Strategy refers to all plans, principles of play, or action guidelines decided upon before a match in order to organize the activity of the team and the players during the game.

DEVELOPING A GAME & TRAINING MODEL

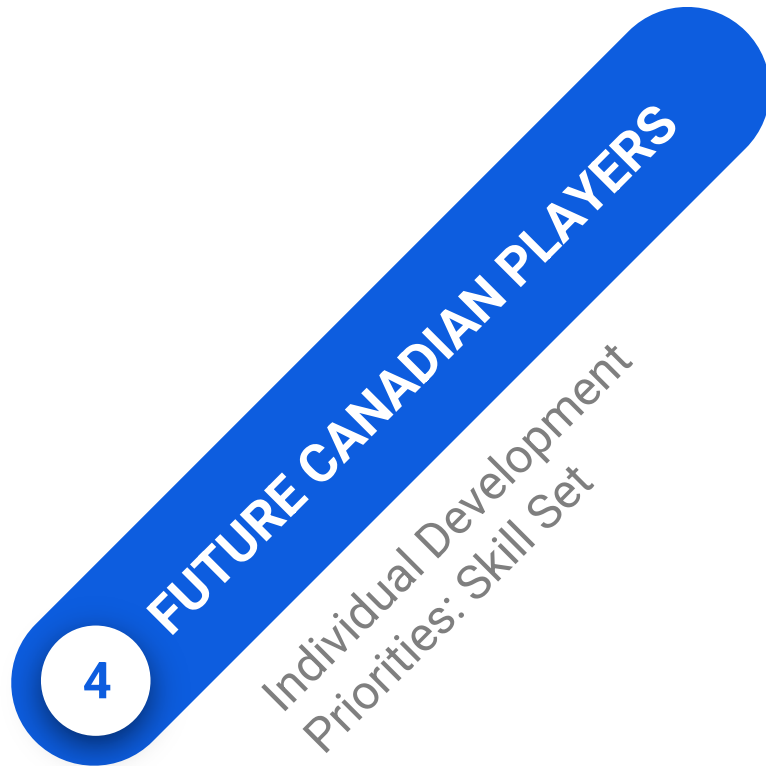

We have started to explore the importance of environment design & demands to support learning and will continue to explore via:

‘Transformational Coaching: Coaching as a complex social process’.

DEVELOPING A GAME & TRAINING MODEL

We have started to discuss the global trends of the game and its impact on future player development.

This will need to be coupled with what you **prioritize as core Skill Sets** to allow you how you want to play the game.

REMEMBERING THE PLAYER

WARNING

**There is no suggestion
that the game model is
more important than the
individual players.**

DEVELOPING HOW WE WANT TO PLAY

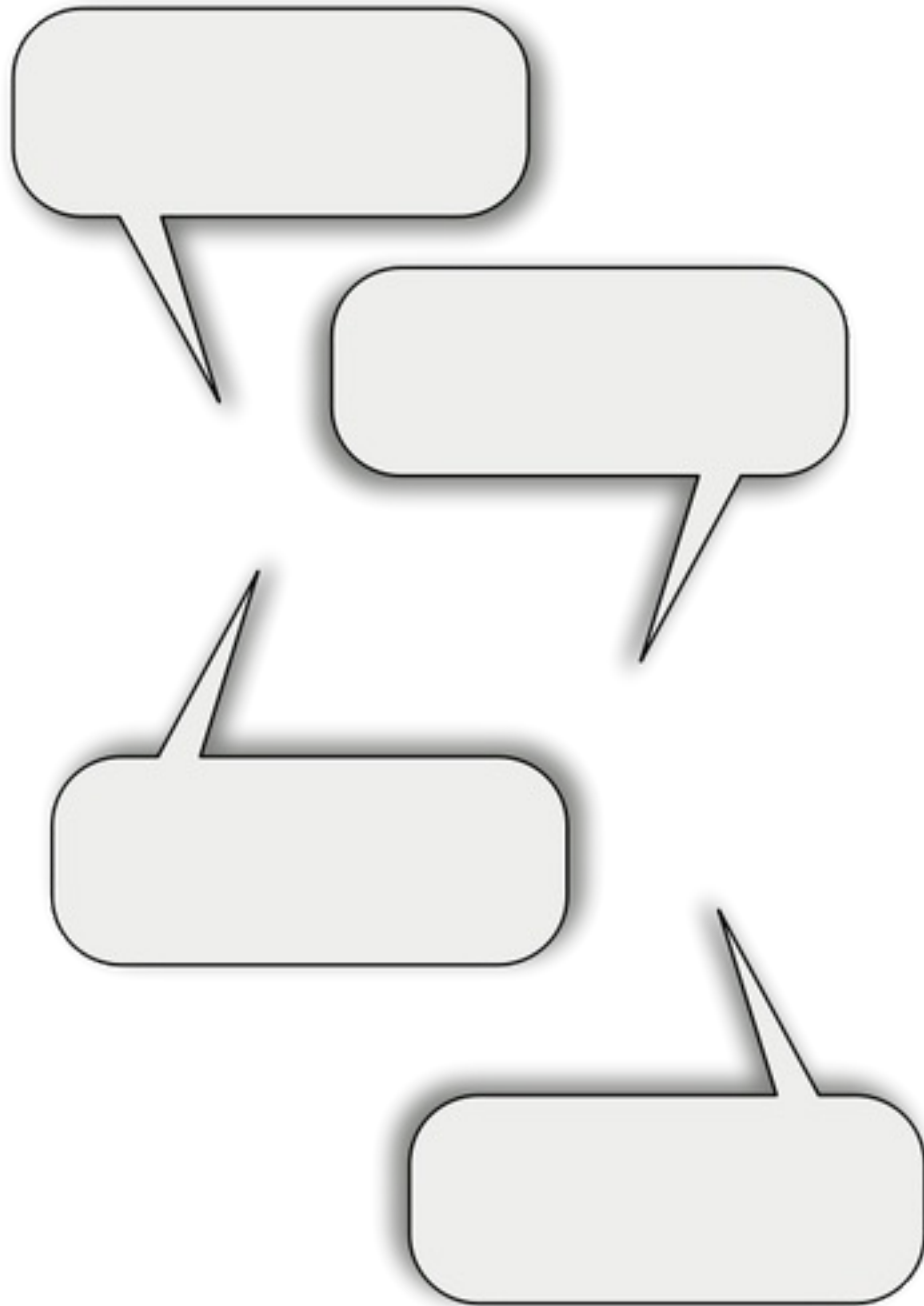

OBSERVATION

**Watch the video
and describe the
style of play in
pairs.**

veo

DISCUSSION

Can you using a sentence explain **HOW** you want your teams to play with & without the ball?

Example: Direct, long-ball football, aiming to bypass the midfield and get the ball forward quickly.

System

A system of play is to provide a range of structures, via the positional arrangement of players establishing communication channels for players into units to help achieve the desired strategy and tactics.

Strategy

Strategy refers to all plans, principles of play, or action guidelines decided upon before a match in order to organize the activity of the team and the players during the game.

Tactics

Tactics are defined as the principles guiding attacking and defensive actions that give immediate solution to the changeable situations influenced by the opposite team. They are the particular actions performed to fulfil the required strategy.

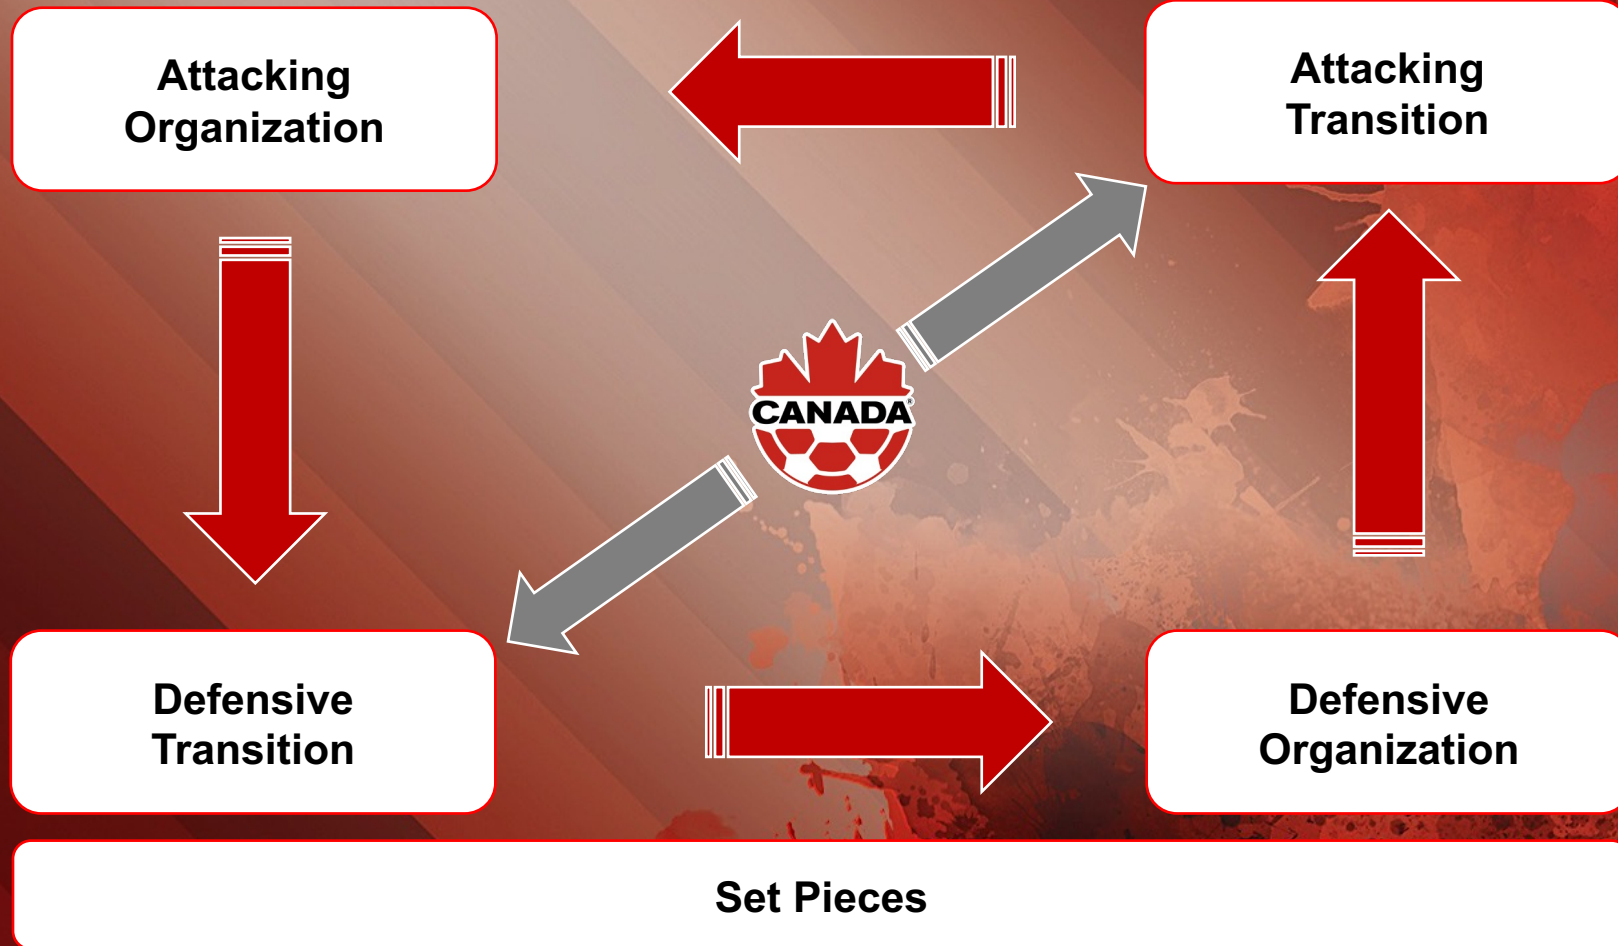

Skill Set

Skills involves solving game problems, using soccer actions in the right place at the right time to gain an advantage. Achieving this requires players to develop clever and effective individual tactics.

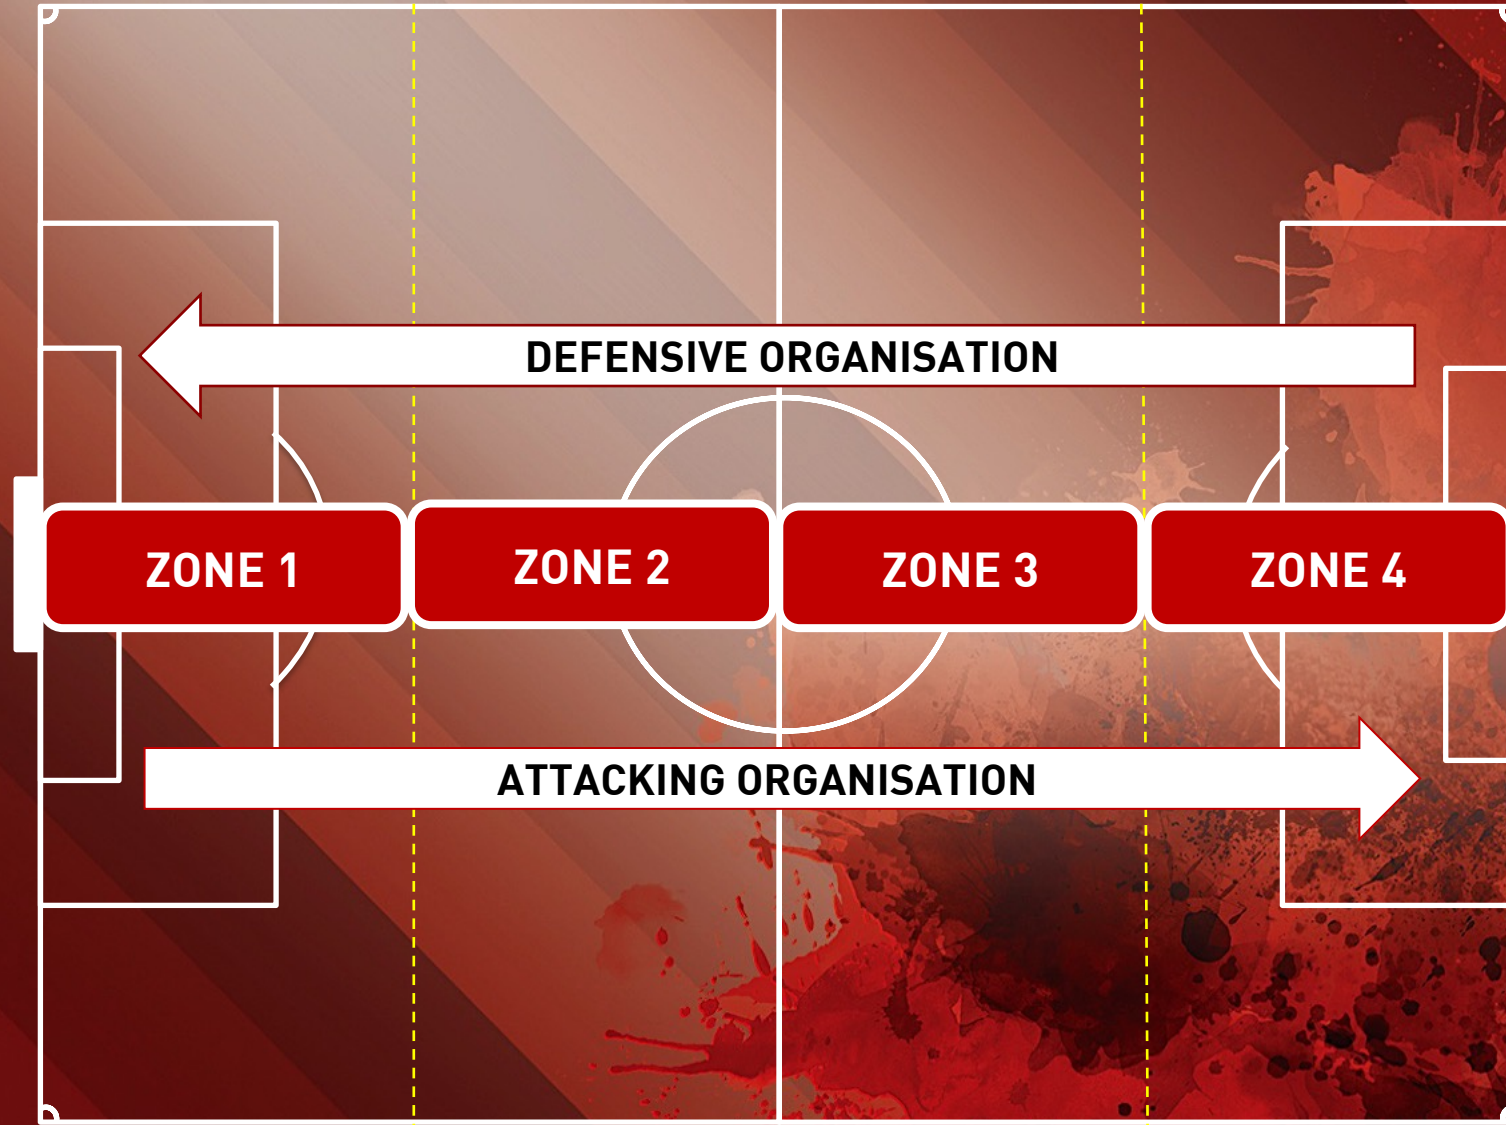

MOMENT OF THE GAME

Moments of The Game

Field Geography

Field Geography

PRINCIPLES OF PLAY

Principles of Play are commonly known and are the **fundamental strategies that a team uses to effectively adapt to any tactical situation during an invasion-type game.**

PRINCIPLES OF ATTACKING

DISPERSAL

Expand the team shape, creating space.

MOBILITY

Calculated movements of players to create opportunities.

IMPROVISATION

Actions and skills to eliminate opponents.

SUPPORT

The ability to receive the ball.

PENETRATION

Progress the ball towards the opponents goal.

PRINCIPLES OF DEFENDING

DENY

If you can win the ball back, win it.

DIRECT

Force the opponents to advantageous space.

BALANCE

Maintain team shape, denying space

DELAY

If you can't win the ball back, delay the opponent making forward progress.

CONTROL AND RESTRAINT

Being patient to regain possession

System

A system of play is to provide a range of structures, via the positional arrangement of players establishing communication channels for players into units to help achieve the desired strategy and tactics.

Strategy

Strategy refers to all plans, principles of play, or action guidelines decided upon before a match in order to organize the activity of the team and the players during the game.

Tactics

Tactics are defined as the principles guiding attacking and defensive actions that give immediate solution to the changeable situations influenced by the opposite team. They are the particular actions performed to fulfil the required strategy.

Skill Set

Skills involves solving game problems, using soccer actions in the right place at the right time to gain an advantage. Achieving this requires players to develop clever and effective individual tactics.

System

Strategy

OBSERVATION

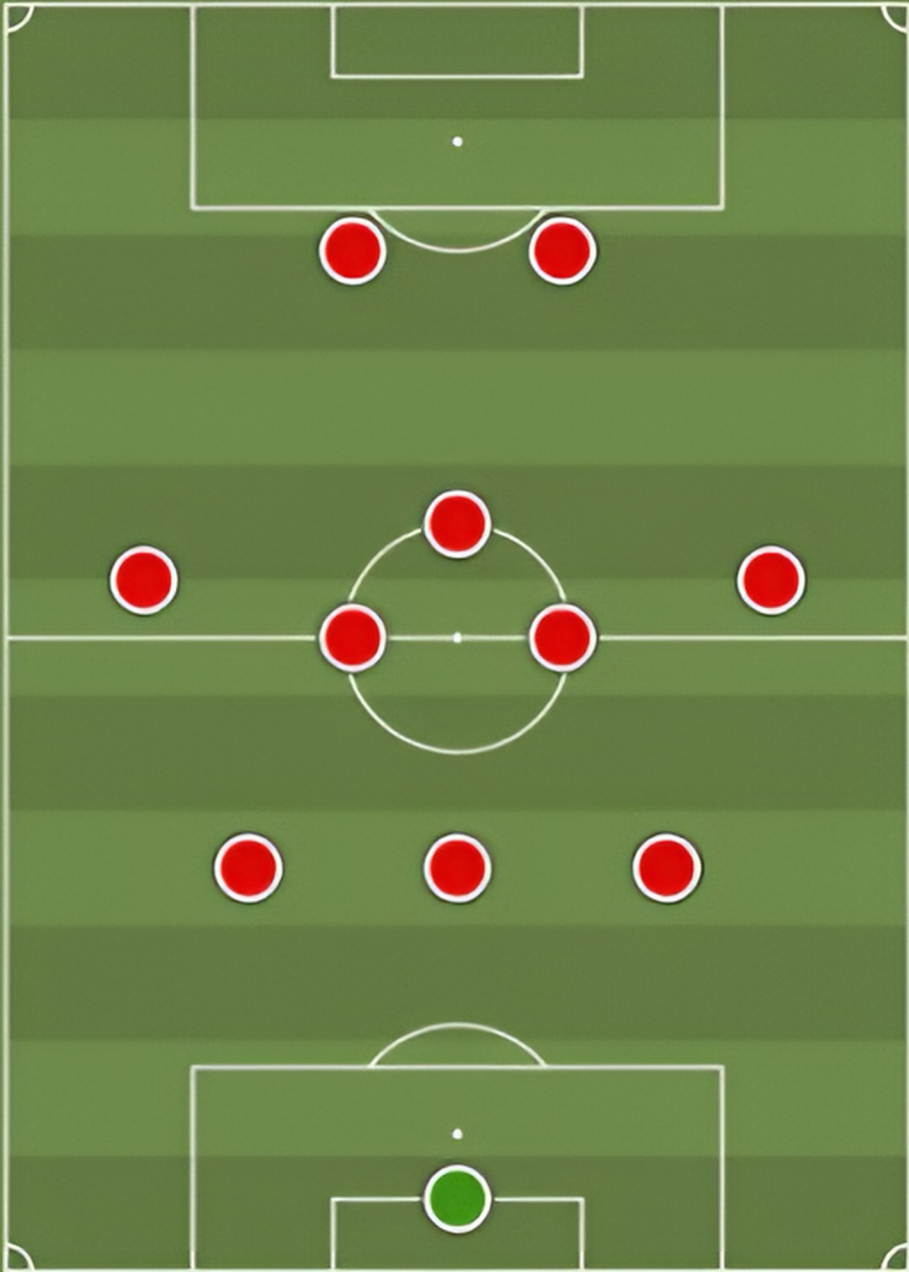

How would you look to play against this opposition?

**Consider the principles of play when developing your
SYSTEM-STRATEGY**

ATTACKING ORGANIZATION

ZONES 1-2-3

SYSTEM

The objective of establishing a system of play is to provide **a level of structure** and establish communication channels for players into units to help achieve the desired strategy and tactics.

SYSTEM

Example #1: A team might adopt a 1-4-3-3 defensive shape in zones 1-2 but adapt to a 1-4-4-2 in zones 3-4.

SYSTEM

Example #2: A team might adopt a 1-3-5-2 attacking shape in zones 1-2 but adapt to a 1-4-3-3 in zones 3-4.

STRATEGY

Strategy in soccer is the way a team plans for a particular match or situation.

Strategy can regularly change from one match to the next, and often within the same match, depending on the events that occur.

STRATEGY

Example #1: A team might adopt a strategy that they want to press high in zones 3-4 forcing their opponents to channel 1 to force direct play. However, if the opposing team breaks into zones 3-2 the strategy to drop into a medium block could occur.

STRATEGY

Example #2: The opposing team might make a substitution and/or change of system which results in the strategy changing.

PLAN A PHASE OF PLAY

DESIGN A PHASE OF PLAY: Based on the **SYSTEM-STRATEGY** you identified, plan a phase of play introducing your ideas

DESIGN
